Application Instructions		
* Contents can vary		

Many industrial and marine companies today are suffering from Un-Planned small pipe leaks that need an instant repair solution. The LEAKS can seriously affect the companies ability to continue to manufacture and make profits.

To prevent the replacement of pipe work – Unique Polymer Systems can supply a long term solution that enables full repair whilst allowing full production / plant operation to continue.

By utilising UPS Pipe Repair Tape – immediate and cost effective repairs can be carried out. Surface preparation is at a minimum due to the surface tolerant characteristics of the Resin product.

The end result can offer long term protection at a working temperature of 270°C and at pressures ranging from 10 bar (150 psi) through 27 bar (400psi) if used in conjunction with UPS PlasSteel Metal Repair Stick and a DOUBLE WRAP.

The finished repair can seal effectively after only 5 minutes with full cure after 30 minutes
