Application Profile

Repair Don't Replace!

One of our **SUCCESSFUL INTERNATIONAL** distributors has sent in the following pictures of successful applications that we can share with you -

This APPLICATION has been carried out in the face of still competition from many companies.

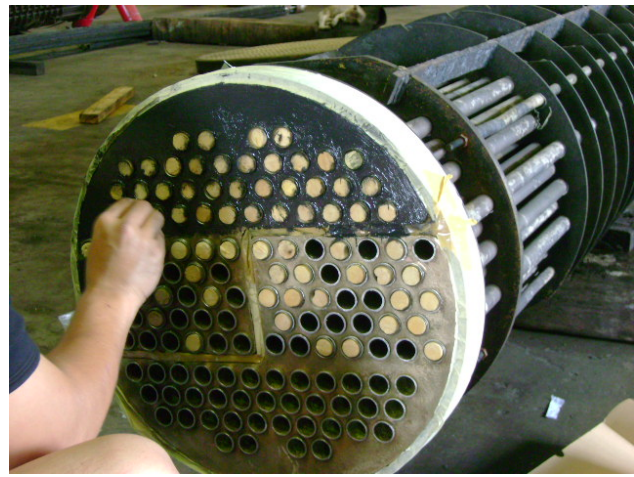

With the worlds wide slow down in the economy - companies are **ACTIVELY** looking for new and innovative ways that they can not only keep their plants operational **BUT** also in reducing the **HIGH COST** of capital equipment replacement. Unique Polymer Systems **HAS** the products and expertise to help!!

These are of APPLICATIONS being carried out with the following Unique Polymer Systems Polymer Products.

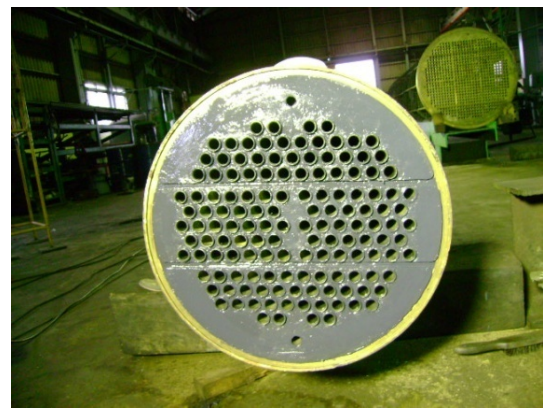

PS200 [Ceramic Paste](#)

PS205 [Ceramic Fluid](#)

PS105 [Metal Paste](#)

After the proper [SURFACE PREPARATION](#) - masking tape is used to protect areas not required to be coated.

Works are used to prevent the repair polymer from entering into the RODS / PIPES -
