The Engineer's Choice

... for Solutions

Application Profile

Repair Don't Replace!

- One of our distributors has just completed further coating works on Fluid Flow Equipment - Heat Exchangers and Refining Equipment.
- Most of these applications were first coated and in some cases repaired in 2005 - using the Engineering Grade Metal Repair (UPS105) and the Ceramics UPS200 and UPS205.
- Despite the constant erosion and corrosion capabilities of the fluids involved with these applications - the products have maintained their integrity.

The Engineer's choice for Maintenance Polymers
